

PROMPT ENGINEERING – Experiment 3

Name of the Student Karthi Prabhu R

Register Number 212225060296 Course /

Subject Name Prompt Engineering

(19TD608)

EX.NO: 3 – Exploring the Different Types of Prompts

Aim

To write prompts for different prompt types such as Straightforward Prompts, Tabular Format Prompting, Preceding Question Prompting, and Missing Word Prompting using two different scenarios.

Straightforward Prompts

Use Case 1: Artificial Intelligence

Prompt:

Define Artificial Intelligence in one sentence.

Prompt:

List three applications of Artificial Intelligence in daily life.

Use Case 2: Programming

Prompt:

Explain the concept of a loop in Python.

Prompt:

List four basic data types used in Python programming.

Tabular Format Prompting

Use Case 1: Programming Languages

Prompt:

Provide a table comparing Python, Java, and C++ based on features, difficulty level, and common applications.

Prompt:

Create a table listing five programming languages, their year of creation, and primary use cases.

Use Case 2: AI Tools

Prompt:

Create a table comparing ChatGPT, Gemini, and Copilot based on developer, main purpose, and key features.

Prompt:

Provide a table showing different types of AI models, their descriptions, and examples.

Preceding Question Prompting

Use Case 1: Machine Learning

Prompt:

What is Machine Learning? Explain how machines learn from data with examples.

Prompt:

Why is data important in Machine Learning? Describe the role of datasets in training models.

Use Case 2: Cyber Security

Prompt:

Why is cybersecurity important in today's digital world? Explain common cyber threats.

Prompt:

How do firewalls protect computer networks? Describe their working process.

Missing Word Prompting

Use Case 1: Computer Basics

Prompt:

The brain of the computer is the ____.

Prompt:

A device used to input text into a computer is called a ____.

Use Case 2: Artificial Intelligence

Prompt:

Artificial Intelligence enables machines to perform tasks that normally require ____ intelligence.

Prompt:

Machine Learning is a subset of _____ Intelligence.

Output

Different types of prompts such as Straightforward Prompts, Tabular Format Prompting, Preceding Question Prompting, and Missing Word Prompting were created for different scenarios.

Result

Thus, the different types of prompts were explored and written successfully.
